WhatsApp AI Features for Developers

Buyer sales and property recommendations

ONE MONTH FREE TRIAL FOR EVERY NEW COMPANY

One official company WhatsApp number serving prospective buyers, approved brokers and existing owners. The developer controls its inventory, commercial terms, information access and internal workflows.

Buyer enquiries and sales

1 AI enquiry handling Answer enquiries around the clock using approved project and company information, with staff escalation when needed.

2 Language and voice support Start with English and Arabic text and voice-note understanding; expand languages after quality testing.

3 Buyer qualification Understand budget, down payment, instalment capacity, property type, bedrooms, preferred location, purchase purpose and timing.

4 Property matching Search authorised inventory and recommend suitable available units, explaining why each matches the buyer.

5 Unit comparison Compare price, size, floor, view, layout, location, handover information and payment terms.

6 Brochures and media Share current floor plans, brochures, images, videos, maps and virtual-tour links.

7 Payment-plan explanation Show booking amounts, instalments, handover balances and applicable approved fees.

8 Approved sales offers Generate branded unit-specific PDFs or links with current terms, offer reference and expiry.

9 Viewings and meetings Check customer, consultant and venue availability; book show-apartment visits, briefings and virtual meetings.

10 Booking assistance Recheck availability, request authorised holds and guide buyers through the developer's reservation process.

11 Payment guidance Share approved secure payment pages and verified beneficiary instructions; confirm status through finance records.

12 Follow-up and human support Send permitted reminders and matching-property updates; hand over to the assigned consultant with the conversation context.

Broker network and existing owners

Broker network management

13 Agency onboarding Provide a registration link, collect required documents securely and route the application for approval.

14 Agent verification and access Link each agent to an approved agency; control project access and revoke permissions when required.

15 Broker inventory and offer service Let authorised brokers search availability and generate client-ready offers without waiting for routine sales-team assistance.

16 Daily inventory distribution Send opt-in, filtered availability sheets and project updates with a clear generation time.

17 Client attribution Register introduced clients, detect duplicate claims and apply the developer's lead-protection rules.

18 Broker briefings Arrange individual or agency group briefings with the internal team, presenter and venue.

19 Deal and commission visibility Provide permitted booking progress, missing-document requests, commission eligibility and payment status when integrated.

Owner service and support

20 Verified owner access Confirm identity and property entitlement before revealing private records.

21 Statements and payments Retrieve statements, instalment schedules, invoices and receipts; assist with approved payment routes.

22 Construction and handover Share approved progress updates, required documents and available handover appointments.

23 Snagging and defects Capture issues and photos, arrange inspections and track repair requests.

24 Complaint tickets Provide a reference, responsible team, response target, status updates and escalation for delayed cases.

25 Community services Support service-charge enquiries, permits, access cards, amenities and NOC requests through the authorised operator where integrated.

Developer dashboard and free trial

Dashboard and management

26 Shared team inbox View conversations, assign staff, add internal notes and pause the AI for human takeover.

27 Sales pipeline Track enquiries, qualified leads, offers, confirmed appointments, holds and bookings.

28 Inventory and commercial controls Monitor data freshness, manage approved offers and promotions, and route exceptions for approval.

29 Marketing campaigns Segment eligible contacts, manage consent and approved templates, schedule messages and track replies and opt-outs.

30 Team calendars Manage consultant availability, show-unit capacity, meeting reminders, attendance and cancellations.

31 Agency administration Manage applications, agreements, agents, renewal dates and attribution disputes.

32 Service desk Assign tickets, track response targets, escalate delays and record closure feedback.

33 Knowledge management Approve FAQs, documents and media; review unanswered questions and correct outdated content.

34 Performance reporting Measure response time, offer turnaround, appointments, broker activity, service outcomes and operating cost.

35 Access and audit history Separate developer data, restrict access by role and record sensitive changes and completed actions.

Developer workflow

Connect the company number and approved systems, configure projects and teams, approve content and offer rules, test the selected workflows, then activate the service. Staff monitor exceptions and review outcomes through the dashboard.

One month free trial

Every new developer company receives one free month. Proposed trial start: activation after the agreed setup is ready. The company tests its agreed feature scope with selected projects and users, reviews the results, and can then continue on a paid plan.

Confirm trial limits and paid-plan terms before activation. The free offer does not remove third-party operating costs; account for them in the trial budget. Meta messaging charges depend on message category and recipient market. Source: https://whatsappbusiness.com/products/platform-pricing/

Feature scope is proposed. Live inventory, offers, bookings, payments and owner records require the relevant approved integrations. A sales offer does not reserve a unit; payment and booking completion require system confirmation.
