WhatsApp AI Features for Broker Companies

Agency access and daily selling tools

ONE MONTH FREE TRIAL FOR EVERY NEW COMPANY

Broker agencies and their authorised agents use a connected developer's official WhatsApp number to obtain information and progress routine sales tasks. Access is limited to each developer's approved projects, inventory and commercial rules.

Agency registration and verified access

1 Agency registration Receive a secure application link, submit required credentials and track approval or missing documents.

2 Agent verification Verify through a registered contact or email OTP and link the agent to an approved agency.

3 Agency administration Allow the agency administrator to manage agents and revoke access for departing staff.

4 Role-based information Show only authorised projects and records; keep client and commission details restricted to permitted users.

Inventory and sales material

5 Natural-language inventory search Ask for available units by budget, project, bedrooms, property type, handover or payment plan.

6 Client requirement matching Find suitable options based on the client's needs and available down payment.

7 Latest availability sheets Request filtered PDF or Excel sheets showing when the information was generated.

8 Daily inventory updates Subscribe to project-specific daily digests, newly available units and relevant changes.

9 Approved sales offers Generate client-ready unit offers with approved prices, payment plans, validity and a reference number.

10 Project information and media Access approved brochures, layouts, images, videos, maps and current launch material.

11 Unit and payment-plan comparison Compare shortlisted options and explain payment timing and applicable costs.

12 Multilingual assistance Ask questions in supported languages and use voice notes where enabled.

A trial or OTP alone does not grant access to confidential inventory. Developer approval remains required. The service does not imply access to every Dubai developer's database.

Broker coordination and free trial

Client and deal coordination

13 Client registration Register introduced clients, receive a reference and check attribution status under the developer's rules.

14 Duplicate lead handling Route conflicting client registrations for review without revealing another agency's confidential records.

15 Briefings and group visits Arrange a project briefing for one agent or an agency team using confirmed internal availability.

16 Client viewing bookings Coordinate the buyer, agent, developer consultant and sales gallery or show apartment.

17 Reminders and rescheduling Receive confirmations, directions and reminders; change or cancel appointments.

18 Reservation requests Request permitted unit holds, see expiry times and follow the developer's booking steps.

19 Secure document submission Receive an approved upload link and track outstanding booking documents.

20 Deal and commission tracking Check permitted booking stages, commission eligibility, invoices and finance-confirmed payment status.

21 Agency support tickets Raise registration, offer, lead-attribution or commission queries and track resolution.

22 Agency dashboard Where enabled, view the agency's own team access, registered clients, appointments and permitted deal statuses.

Broker workflow

Verify agency and agent access, describe the client's requirement, receive current options, register the client where required, generate an approved offer, arrange a briefing or viewing, and follow the reservation and deal status.

One month free trial

Every new broker company receives one free month. Proposed trial start: activation after the required developer approvals and agreed setup. Test the enabled features with the agency's authorised agents, review usage and outcomes, and then choose whether to continue on a paid plan where applicable.

Trial scope, usage limits and any subsequent commercial terms are confirmed before activation. Buyer and owner enquiries are not described as paid subscriptions. Broker commercial arrangements remain separate from a developer's decision to sponsor access for its network.

Features depend on the participating developer and connected systems. Offers do not reserve units. Commission and payment information is shown only when authorised and available. Daily inventory is a timestamped snapshot, so availability is checked again before issuing an offer or requesting a hold.
